FORM HS-01 · REV. 5 · POST-STASIS REFRESHER · MODULE 1 OF 9 · ISSUED AT REVIVAL MED BAY

DUNEWRIGHT COLONY WORKS
Settlement Site 4 · Construction Division · Safety & Health

WELCOME BACK.

YOU'VE BEEN ASLEEP A LONG TIME. LEARN THE SITE BEFORE THE SITE TEACHES YOU.

REVIVAL CLEARANCE

YOU MAY NOT WORK AT ALL UNTIL REVIVAL MED BAY CLEARS YOU.

Revival Med Bay is the Stasis Revival Unit's clearance bay. It clears you to work. It doesn't treat injuries: those go to your sector's **Forward Aid Station (FAS)**. Stasis leaves you dehydrated, weak and slow to react for the first days. You may feel fine and still fail the checks.

3	0	5
CHECKS TO PASS	VEHICLES, MACHINES OR POWERED TOOLS UNTIL CLEARED	HEAT-RAMP DAYS ON THE RAMP BAND

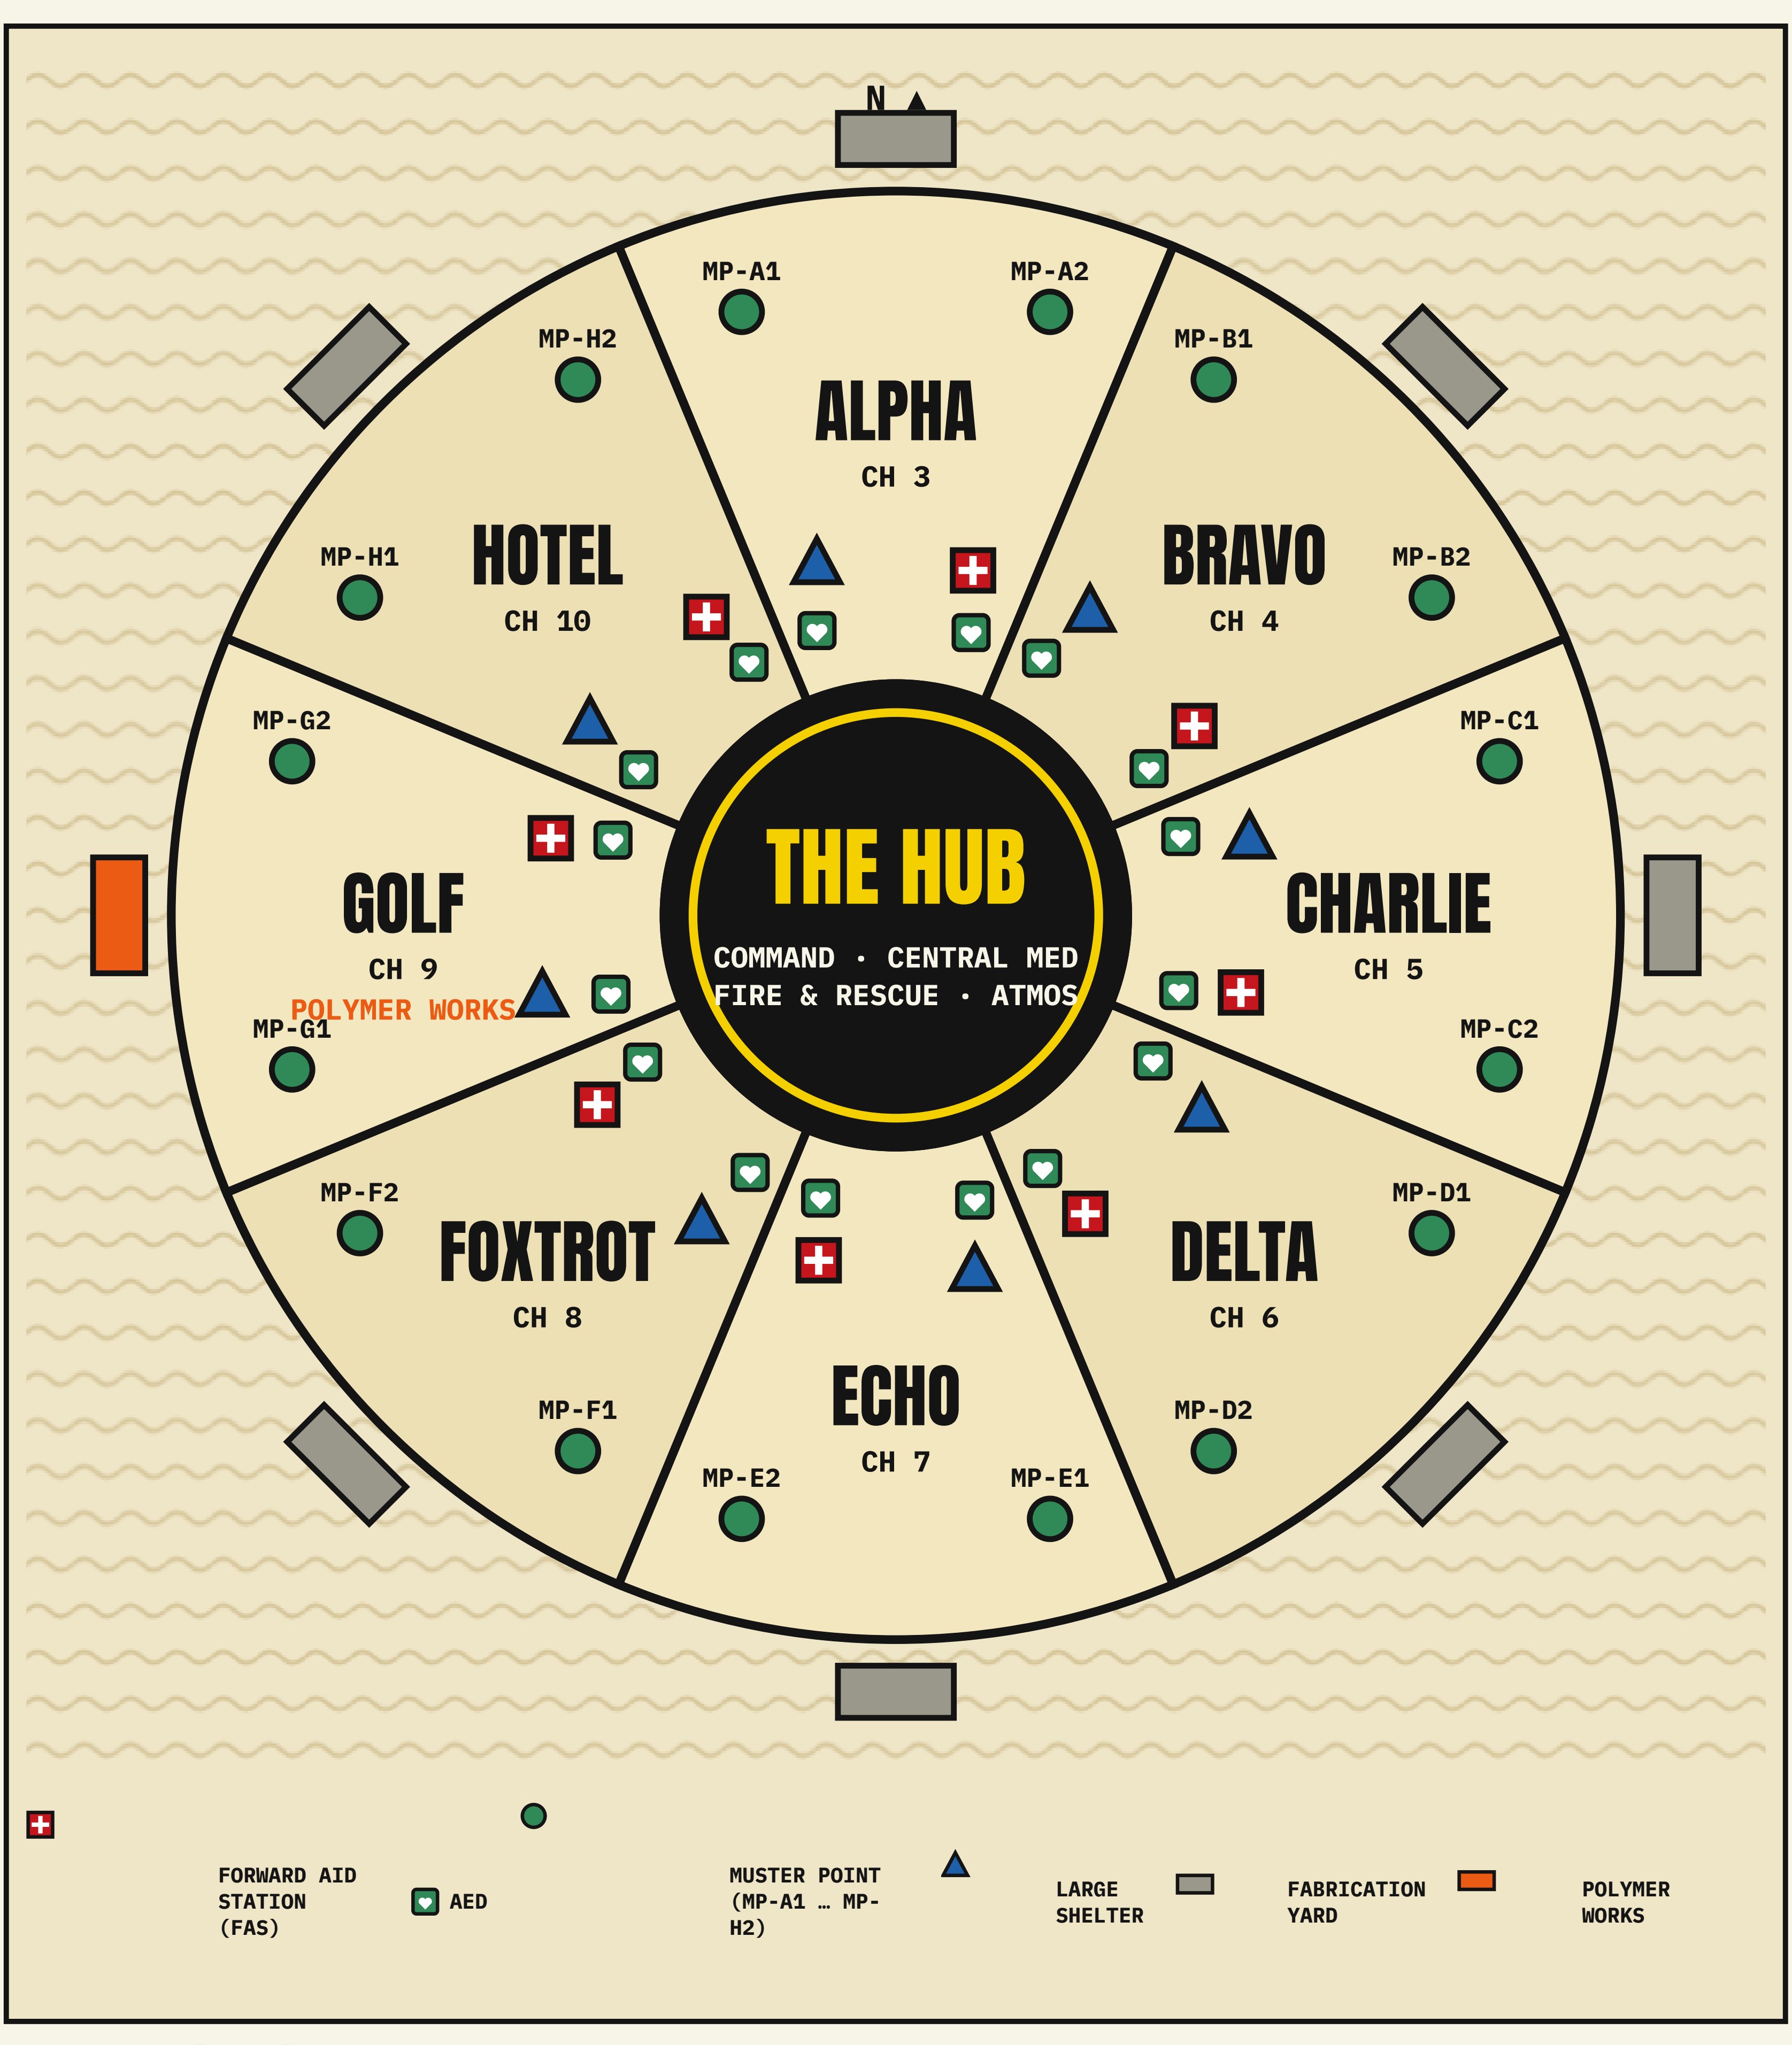
- **Weigh-in and hydration check.** Your daily heat weigh-ins happen at the shift weigh station, against that day's starting weight, not this one.
- **Balance and vision check.** Fail either and Revival Med Bay may clear you for ground-level light duty only: Deck 0, no ladders, no height, no powered tools or vehicles. The restriction goes on your badge. You're retested each day, and only Revival Med Bay lifts it.
- **Grip and reaction check.** Required before you touch powered tools, cranes or vehicles.

RAMP band: a black-and-yellow chevron band reading "RAMP", with a reflective strip, worn on the front and back of your helmet. It goes on at Day 1 of your heat ramp (your first shift with any heat exposure after clearance) and comes off only after your crew lead logs Day 5 complete. **Reset to Day 1, band back on,** after fever, vomiting or diarrhea, any heat illness, or 7 or more days away from heat work. That applies to everyone, not only new revivals. Full ramp rules: Module 3 (HS-03).

Off work for any illness or injury? Go back to Revival Med Bay for re-clearance before your next shift.

SITE MAP

SETTLEMENT SITE 4 · NORTH AT TOP
NOT TO SCALE



FAS call sign "[Sector] Aid": all injuries and illness. Central Med at the Hub takes serious cases. Every grid block also has a smaller sealed, cooled shelter, call sign "Shelter [Sector]-[grid]", stocked with water, ice, toilets, a first aid kit, an AED, a radio and emergency lighting. AEDs (automated external defibrillators) are at every FAS, shelter, structure cooling station and lift muster, never more than a 3-minute round trip away. On your first shift, find your nearest shelter, AED, FAS and muster point.

SAY WHERE YOU ARE

Every radio call, report and request uses the same location format. Medics, rescue and cranes find you by it.

CHARLIE-14, TOWER B, DECK 3, EAST STAIR

SECTOR-GRID	STRUCTURE	DECK	LANDMARK
Sector Alpha to Hotel, then grid 1–40. Grid numbers are painted on every grid post.	The building or tower. Skip it on open ground.	Deck 0 is the ground. Below grade is "Deck minus 1" and so on.	The nearest thing a stranger could find: stair, hatch, haul road, end of a trench.

Open ground: "Delta-22, Deck 0, haul road east". Trench: "Echo-7, trench, north end". Say grid numbers digit by digit: "Charlie one-four".

RADIO RULES

- **Scan rule: every radio scans Ch 1 Site Emergency, Ch 16 Atmospheric/Weather and your sector channel.** Crane, equipment and hot-work crews add their trade channel.
- Routine crew traffic and check-ins go on your **foreman talkgroup** (for example "C-F14"). That's what "crew channel" means.
- Ch 1 is for emergencies only. No chatter, no checks. Hub Command rebroadcasts every siren and every sandstorm, flood and lightning warning on Ch 1.
- **Buddy pairs always.** Buddies watch each other the whole shift. At Extreme caution heat level and above, stay within sight of your buddy. Your crew lead sees every crew member at least every 30 minutes.
- Full channel plan, call signs and check-in rules: radio reference (REF-RAD).

EMERGENCY CALL · CH 1

"Emergency, emergency, emergency." Then: type · location · number hurt · hazards · your call sign.

HEAT CASUALTY · MAN DOWN · FALL · FIRE · GAS · CHEMICAL · STRUCTURAL · STRUCK-BY · CAUGHT-IN · ELECTRICAL · CONFINED SPACE · FLOOD · SANDSTORM

A short qualifier is fine ("Fall, worker suspended"). A burn with nothing still burning is "Man down".

After the call, stay on Ch 1 until Hub Command or the medic releases you. Everyone else stays off Ch 1. Other channels keep working.

ALL STOP ("ALL STOP, ALL STOP" on any channel, or 3 short siren blasts): stop all motion, hot work and machine operation. Hold position. A suspended load is landed only on the signal person's direction. Only whoever called it, or command, clears it, on the same channel.

SIRENS

HEARD SITE-WIDE · REBROADCAST ON CH 1
KNOW THEM BEFORE YOUR FIRST SHIFT

— — — —	**TAKE SHELTER** Steady tone for 3 min, repeated every 5 min while the danger lasts · red strobes	Sandstorm or other atmospheric danger. Make your work safe, then go to the **nearest sealed shelter** with your buddy. Don't wait to see it. Don't head for the muster point.
▲▼▲▼	**EVACUATE TO MUSTER** Alternating high-low for 3 min, repeated · amber strobes	Leave the structure by the nearest safe route. Go to the **assigned muster point of the sector you're working in today** and report to your crew lead. The muster warden reports crew headcounts to the Super. Never go back for tools.
● ● ●	**ALL STOP** 3 short blasts, 1 second each	Stop all motion, hot work and machine operation. Hold position. Listen to Ch 1.
—	**ALL CLEAR** One 15-second tone, then Hub Command by voice on Ch 1	Hub Command says **"All clear, all clear, [area]"** on Ch 1. **Never leave a shelter or restart work on a tone alone.** Wait for the Ch 1 voice all clear or your crew lead.

Strobes back up the sirens in sealed cabs, high-noise areas and shelters. In double hearing protection or a sealed cab, watch for strobes and keep Ch 1 loud enough to hear. Weekly siren test: every 7th day at 1200, announced on Ch 1 before and after ("This is a test"). A siren with no test announcement is real. Sandstorm watches and warnings come first on Ch 16 and Ch 1: see Module 2 (HS-02). Machine horns are machine-local, never site signals. Every sector runs a shelter drill and an evacuation drill each month.

HARD HATS BY STATION

COLOR TELLS YOU WHO TO ASK

COLOR	STATION	GO TO THEM FOR
White	Superintendents, assistant supers, general foremen, foremen, engineers, managers (including Lift Directors)	Work orders, plans, permits, lift plans
Yellow	Crew members, laborers, equipment and crane operators, machinists, polymer techs, all other trades	Your crew and the work face
Yellow + white LEAD band	Crew leads	Your first stop for anything
Orange	Riggers, qualified signal persons, lift crew	Anything under or near a load
Blue	Electricians and power techs (Electrical & Power)	Power, cables, energized gear. Only they test for voltage.
Brown	Welders, cutters, hot-work crews	Hot-work zones (permits come from the area foreman, white hat)
Green	Safety & Health officers, Industrial Hygiene, Atmospheric Office field staff	Hazards, near misses, PPE, dust and noise readings
Red	Fire & Rescue	Emergencies. They take command of fire, rescue and hazmat scenes. Follow their orders.
Red, white cross	Medics and Stasis Revival Unit (SRU) staff	Injuries and illness. SRU staff run revival clearance.
Grey	Survey, QA/QC (quality assurance and quality control), inspectors	Layout, measurements, inspections
Black	Security	Gates, badges, site access
Purple	Visitors and non-construction staff	Always escorted. Tell your crew lead about anyone in purple without an escort.
RAMP band	On any color: heat-ramp Days 1–5 (new revival or reset)	Watch them. Check on them first.
Red FIRE WATCH vest	A trained crew member on fire watch, over normal PPE	Keep clear of their watch. A fire watch has no rescue or command authority. Red hats do.

Check your helmet every shift and swap it free at the Quartermaster if it's cracked, chalky or faded: see PPE care in Module 2 (HS-02).

FIRST SHIFT

IN THIS ORDER · YOUR CREW LEAD SIGNS EACH STEP

1. **Pass revival clearance** at Revival Med Bay. Collect your badge, radio and RAMP band.
2. **Draw your kit** from the Quartermaster (list below). Respirator: **medical evaluation first** (Revival Med Bay must clear you to wear one), then training and your fit test with Industrial Hygiene. See Module 2 (HS-02).
3. **Report to your crew lead** at the assigned muster point of the sector you're working in today. Get your foreman talkgroup and your buddy.
4. **Walk the route** with your buddy: nearest FAS, shelter, AED, cooling station, toilets, drinking water and muster point.
5. **Radio check** on your foreman talkgroup. Confirm your scan list: Ch 1, Ch 16 and your sector channel (plus your trade channel if you have one).
6. **Finish HS-01, HS-02, HS-03 and HS-09** before you set foot on a work face. Modules are posted at every muster point and on the refresher index.
7. **Day 1 of your heat ramp:** no more than 20% of the shift in the heat, light work only (no heavy lifting, digging or hauling), and half the work/rest table's work minutes. Spend the rest of the shift out of the heat: refresher modules, fit testing, kit issue. Your crew lead logs your minutes in the heat.

COMPLETION RULE

- **Before Day 1 at any work face:** HS-01, HS-02, HS-03 and HS-09.
- **Before your first 100% shift:** all nine modules and all four supplements, Supplement A (HS-SA) to Supplement D (HS-SD).
- **Before any task:** that task's module or supplement, and the badge endorsement for it.

CHAIN OF COMMAND

Crew of about 12 → Crew Lead → Foreman → General Foreman → Sector Superintendent → Deputy Director → Colony Construction Director.

Go to your crew lead first. Safety concerns can go straight to any green hat.

At a scene: the first person there is in charge until relieved, and hands over command out loud. Fire & Rescue takes command of fire, rescue and hazmat scenes when it arrives. The Super runs muster and headcount.

Full chart: org chart (REF-ORG). Role names: roles and glossary (REF-GL).

BADGE RULES

- Wear it on your chest, photo out, every shift.
- It lists your completed modules, supplements and endorsements (machines, permits, roles), your fit-test date and your ramp status. **No badge entry, no task.**
- Pre-stasis qualifications count only after you pass a practical test here.
- Never lend it. Never badge someone else through a gate.
- Lost badge: tell your crew lead the same shift. Your crew lead reports it to the Security Desk.

KIT ISSUE

From the Quartermaster (Ch 15):

- Helmet, boots, gloves, eye and hearing protection.
- Hi-vis: Class 2 by day, Class 3 at night, or a hi-vis cooling vest.
- Cooling vest.
- Personal lock (red, engraved with your Colonist ID) and tags.
- Each crew carries a trauma kit (two tourniquets) and a first aid kit.
- Respirator only after your respirator medical evaluation and fit test.

REPORT IT

Report every **injury, illness, first aid case, near miss, damage and unsafe condition** to your crew lead before the end of the shift. Anything serious: immediately. Use form **HS-IR** with your Colonist ID.

- Don't move anything except to rescue someone.
- Safety & Health investigates with the crew. Findings are shared at muster.
- **No retaliation** for reporting. A near miss is an accident that didn't happen this time. The next crew depends on what you tell us.
- Someone needs a medic now? Ch 1 first, then report.

SITE SERVICES

- **Toilets and drinking water** within a short walk of every deck. Never drink less to avoid a long walk.
- Drinking water taps are **blue-labeled "DRINKING WATER"**. Recycled water and coolant never are. Never drink from an unlabeled tap.
- **Cooling station** with an ice trough on every deck of active structures. It's also your shift weigh station.
- **First aid:** every crew has a first aider (CPR and Stop the Bleed). Know who yours is.
- **Visitors** wear purple hats and are always escorted. Their escort keeps them in PPE and in the headcount.
- **Sand stingers:** venomous burrowing arthropods shelter in rock, debris and stored gear. Shake out boots, gloves and PPE before you put them on. Look before you reach into gaps. Report any sting to the FAS.

YOUR BODY AFTER STASIS

Stasis costs you muscle. Strength comes back over weeks, not days.

- **Team lift or a mechanical aid** (hoist, cart, telehandler) for anything heavy, awkward, or carried across loose sand.
- **One-person lift limit: 50 lb** in good conditions (site rule). Go lower when the load is low, far from your body, twisting or repeated.
- **Ramp days and light duty: 25 lb** (site rule).
- Keep the load close and turn with your feet, not your back. Panels in wind act like sails: carry them in pairs.
- Heavy work in heat can break down muscle (rhabdomyolysis). Dark urine, or muscle pain or weakness: go to the FAS now (HS-03).

YOUR MIND AFTER STASIS

Disorientation, memory gaps, poor sleep, low mood and grief for lost time and people are common after stasis.

- **Talk to someone.** Stasis Revival Unit (SRU) counselors at Revival Med Bay: walk in, any shift. Your FAS medic can refer you to Central Med counselors at the Hub.
- **No penalty for asking for help.** What you say stays confidential unless someone's safety is at risk.
- Worried about a coworker? Tell your crew lead or the FAS. If someone talks about harming themselves, stay with them and get your crew lead to take them to an SRU counselor or the FAS. Immediate danger: call Ch 1 "Man down". Never broadcast the reason.

LONE WORK AND FITNESS FOR DUTY

- **No lone work** at Caution heat level or higher, at height, in confined spaces, or near wadis and trenches. Anywhere else, lone work only with 15-minute check-ins and a logged location.
- **Come to work fit:** rested, sober and well. Too tired to stay alert, or unwell? Tell your crew lead before you start. On a medicine that makes you drowsy? Tell your FAS before your next shift; the medic decides what work you can do. No penalty for saying so.
- Fever, vomiting or diarrhea: go to the FAS. It resets your heat ramp to Day 1.
- Night work, shift limits, fatigue and fitness-for-duty rules: Supplement D (HS-SD).

STOP-WORK AUTHORITY

Anyone can stop unsafe work. No penalty, no questions. Stop it, make it safe, tell your crew lead (your foreman if there's no crew lead; any green hat if it isn't fixed). Work restarts only when the crew lead confirms the fix with the person who stopped it. Every stop is logged.

WORKER ACKNOWLEDGEMENT

I have passed revival clearance. I know my sector, muster point, nearest shelter, AED and Forward Aid Station. My radio scans Ch 1, Ch 16 and my sector channel. I know the siren signals, the emergency call and how to report an incident.
