FORM REF-DOC · REV. 5 POST-STASIS REFRESHER · REFERENCE SHEET KEPT BY SAFETY & HEALTH · HUB SAFETY

DUNEWRIGHT COLONY WORKS
Settlement Site 4 · Construction Division · Safety & Health

REVIEW RECORD.

WHAT WAS CHECKED, WHAT IT'S BUILT ON, AND EVERY PLACE DCW GOES BEYOND OLD EARTH STANDARDS.

DOC CONTROL

REV. 5 · POST-STASIS REFRESHER PROGRAM

Covers 9 modules (HS-01 to HS-09), 4 supplements (HS-SA, HS-SB, HS-SC, HS-SD), 6 reference sheets and 2 Atmospheric Office tools. All carry Rev. 5. Rev. 4 copies are withdrawn: pull them from muster points and replace.

Canonical facts for every page (names, channels, sirens, wind table, heat rules, roles, permits) are held in one controlled list by Safety & Health. Where a posted copy disagrees with this revision, the revision wins. Report any disagreement on form HS-IR.

REVIEW SUMMARY

REV. 4 → REV. 5

316	22	145	149
FINDINGS RAISED	S1 COULD HURT	S2 BLOCKS SIGN-OFF	S3 IMPROVEMENT

HOW IT WAS REVIEWED

1. Four independent reviews: health and heat; height, hot work and lifting; energy, chemicals, emergencies and confined spaces; program-wide consistency and gaps.
2. Every real-world number checked against its source standard.
3. Conflicts between pages settled in the controlled fact list, then applied to every page.
4. Gaps closed with new pages: electrical, scaffolds and aerial lifts, night work and fatigue, permits, roles and glossary.
5. Second-round verification of every revised page by two more independent reviewers. They found 24 remaining blockers (2 that could hurt). All 24 were fixed and every page was then cleared.

BIGGEST CORRECTIONS

- Siren tones now have set lengths. Leaving a shelter needs the voice all-clear on Ch 1.
- Power cells are always live and can't be drained. Only capacitors are discharged.
- START triage restored: "starts breathing once the airway is opened" = RED.
- Radio lost mid-lift: the operator stops. Each lift runs on its own talkgroup.
- Work/rest table updated to TB MED 507 (2022) with a Very heavy column. No salt tablets.
- Desert heat limits for gas cylinders, synthetic slings and eyewash water.
- One wind table, one check-in rule and one after-call radio rule on every page.

STANDARDS BASIS

OLD EARTH SOURCES EACH PAGE IS BUILT ON

PAGE	BUILT ON
HS-01 Orientation	OSHA 1926.21 (training), 1926.50 (medical and first aid), 1910.165 (alarm systems), 1926.100 and ANSI/ISEA Z89.1 (head protection)
HS-02 Dust, air, PPE	OSHA 1926.1153 (silica), 1910.134 (respirators), 1926.52 and 1910.95 (noise), NIOSH noise REL, ANSI Z87.1 (eyes), ANSI/ISEA 107 (hi-vis)
HS-03 Heat	NIOSH Criteria for Heat (2016), US Army TB MED 507 (April 2022), NWS heat index, CDC/NIOSH heat illness first aid, Korey Stringer Institute, ACGIH heat stress TLV
HS-04 Height	OSHA 1926 Subpart M (501–503) and Subpart X (ladders), ANSI/ASSP Z359
HS-05 Hot work	OSHA 1910.252 and 1926 Subpart J, NFPA 51B (2019), ANSI Z49.1, OSHA 1910.133(a)(5), CGA P-1, OSHA 1910.1026 (Cr(VI))
HS-06 Cranes, equipment	OSHA 1926 Subpart CC (1408, 1419–1422, 1431), ASME B30.5, B30.9, B30.10, OSHA 1926 Subpart P (excavations), 1926.600–602
HS-07 Lockout, machines	OSHA 1910.147, 1910.212, 1926 Subpart I (tools), ASTM C1055 (hot surfaces)
HS-08 Materials	OSHA 1910.1200 (HazCom/GHS), NFPA 704, ANSI/ISEA Z358.1, OSHA 1926.152 (flammables)
HS-09 Emergencies	START triage, AHA CPR guidelines, Stop the Bleed, NFPA 10, ICS/NIMS, OSHA 1910.38
HS-SA Confined spaces	OSHA 1910.146 and 1926 Subpart AA, NIOSH confined space guidance
HS-SB Electrical	OSHA 1926 Subpart K, 1910.333, NFPA 70E (2024)
HS-SC Scaffolds, MEWPs	OSHA 1926 Subpart L (450–454), ANSI/SAIA A92.22 and A92.24
HS-SD Night, fatigue	OSHA 1926.56 (illumination), NIOSH work schedule and fatigue guidance, UK HSE HSG256

SITE RULES REGISTER

EVERY PLACE DCW IS STRICTER THAN, OR ADDS TO, OLD EARTH STANDARDS

Each of these is labeled "(site rule)" where it appears. None is looser than its Old Earth baseline.

SITE RULE	OLD EARTH BASELINE	WHY DCW GOES FURTHER
Heat levels 125–180°F: Extreme, Extreme heat entry (PTW-HE, 15-min entries), Site closed	NWS heat index chart ends near 125°F	Air here runs past every Old Earth chart
DCW work/rest table: the stricter of TB MED 507 2003 and 2022 in every cell	TB MED 507 (2022) Table 3-2	The two editions differ; DCW takes the safer cell
WBGT 92–94.9 and 95+ rows; cooling vest required for moderate work at 92+	Top row is 90+; TB MED says extreme changes may be needed	WBGT here often passes 90
+20° clothing adjustment also applies to very heavy work	TB MED 507 note lists easy, moderate, heavy	Extends the adjustment to the heaviest work
Heat ramp starts at 20% for everyone, half work minutes on Days 1–4, reset to Day 1 after illness or 7+ days away	NIOSH: 20% start for new workers, 50% for experienced	Stasis erases acclimatization
RAMP band on helmets, Days 1–5	None	Lets everyone see who is most at risk
Hearing protection at 85 dBA, 3 dB exchange	OSHA PEL 90 dBA, 5 dB exchange	NIOSH REL is more protective
Hot work stops at 1% LEL	NFPA 51B and OSHA: no hot work in a flammable atmosphere; confined-space entry limit 10% LFL	An ignition source gets a tighter limit than entry
Fire monitoring walk-throughs up to 3 h after the fire watch near polymer, insulation or sand-sealed seams	NFPA 51B: fire watch 60 min after hot work	These materials smolder before they flame
Site wind table (15 / 20 / 25–30 / 30 mph tiers; higher of local and Ch 16 governs)	Maker limits; OSHA 1926.1431 personnel platforms at 20 mph	Sandstorm-prone site; one table ends sustained-vs-gust confusion
Lightning: stop at 10 miles, resume 30 min after the last strike	NWS lightning safety guidance	Turns guidance into a stop rule
Siren lengths, strobes, voice all-clear on Ch 1; staged sandstorm watch and warning	OSHA 1910.165: alarms must be distinctive and recognized	Stops crews leaving shelter on the wrong tone; gives time to land loads
Own talkgroup for every lift; hands-free, non-scanning operator radio; a named relay scans Ch 1 and Ch 16	OSHA 1926.1420: dedicated channel for signals	Names the channel per lift and keeps warnings reaching the cab
Lock removal by others needs a second person to walk the whole machine	OSHA 1910.147(e)(3)	Prevents switching on with someone inside
100% tie-off at 6 ft; no controlled access zones or safety monitors	1926 Subpart M allows alternatives in some cases	Removes the weaker options
Eyewash and showers shaded and insulated or chilled; weekly run	ANSI Z358.1: tepid water 60–100°F, weekly activation	Pipes in 180°F air would scald
Gas cylinders in cooled shelters, temperature strips, none on open decks at Extreme heat	CGA P-1: cylinders not above 125°F	Shade alone is already above 125°F here
Synthetic sling heat check with an IR thermometer before rigging	ASME B30.9 temperature limits	Sun-baked loads pass the sling limits
Supplied air for all isocyanate spraying (PTW-SP)	OSHA 1910.134: respirator chosen by exposure assessment	Isocyanates sensitize for life
Response targets: FAS medic 4 min, Fire & Rescue 10 min, confined-space on-call rescue 10 min	OSHA 1926.50 "near proximity" (read as 3–4 min)	States the targets plainly
First aider and trauma kit in every crew; AED within a 3-minute round trip anywhere on site	OSHA 1926.50(c)	Large, spread-out workforce
Shift and fatigue limits; limits on safety-critical roles	No OSHA rule; NIOSH and UK HSE guidance	Night is the main shift
Lone work banned at Caution or hotter, at height, in confined spaces, near wadis and trenches	No OSHA rule	Heat and isolation kill quickly
Manual handling: 50 lb one person, 25 lb on ramp days	NIOSH lifting equation (51 lb load constant)	Post-stasis muscle loss
Hard hats by station; RAMP band; red FIRE WATCH vest; purple visitors	ANSI Z89.1 sets no colors	Roles visible at a glance across 15,210 workers
Only blue hats reset breakers, open panels or touch power-cell terminals	OSHA 1910.333 and NFPA 70E qualified-person rules	Removes any doubt about who is qualified

Rules that match an Old Earth standard exactly (for example the 60-minute fire watch from NFPA 51B, or the 20 ft crane clearance from OSHA 1926.1408) are not site rules and are credited to their source on the page.

SAFETY OFFICER SIGN-OFF

I have reviewed Rev. 5 of the Post-Stasis Refresher program against the standards listed above and the site rules register, and I approve it for issue.

REVIEWER	STATION / CALL SIGN	DATE	DECISION
			Approved / Approved with notes

Dunewright Colony Works is a fictional employer. Safety content is adapted from the Old Earth standards listed above; it is not real-world training or medical advice.
